

GENERAL

The **ALMAGHP** is an electromagnetic flowmeter designed to measure the flow rates of conductive liquids in applications with high operating pressures. The robust design of the ALMAGHP allows it to be used in applications with pressures in excess of 6000 psig (42 Mpa). Line sizes ranging from 1" to 8" (25 to 200 mm) can be accommodated by the ALMAGHP, with available process connections including ANSI, DIN, and JIS-type flanges. A wide selection of options is also available including integral or remote mounting, 110-220 V_{AC} or 17-26 V_{DC} power, and HART, RS485 & Profibus communications. The ALMAGHP's unique ability to withstand high pressures, combined with its wide array of available features, makes it an ideal choice for conductive fluids. The ALMAGHP has been successfully used in high pressure application mainly in the oil and gas industries, and a variety other of industrial high pressure applications.
